

Organiser: DARE - Democracy and Human Rights Education

When: 2 December, 15.00

[Register here before November 29th](#)

Digital transformations in Education for Democratic Citizenship Challenging digital competence

Concept

Digital transformation is a cultural, social, and economic process. It is challenging citizens, civil society and policy on multiple levels, therefore raising questions for citizens in their different roles - as users, learners, workers, active citizens, patients, or co-creators of the digital sphere.

The discussions on AI, privacy, smart infrastructure, social media, or data-economy are highlighting the challenge in particular for adult learners. Educational responses need to reflect the mentioned roles and dimensions more. This workshop will discuss how we might support citizens to understand the bigger picture of digitalization, preventing us from sticking to a narrow IT- or media-centred understanding of digital literacy. Which aspects are yet underrepresented in educational discussions and approaches, and also in concepts of digital competence? How to include literacy of AI, data-economy, digital-rights, digital infrastructure, body-machine-interaction in a smart way? How can citizenship education support the EU's efforts in shaping Europe's digital future, in particular becoming a leader in "Technology that works for people"?

Agenda

- Words of welcome, *Nils-Eyk Zimmermann (DARE Network)*
- Panel discussion
 - *MEP Victor Negrescu (S&D, Romania)*
 - *MEP Rasmus Andresen (Greens/EFA, Germany)*
 - *Leena Simon, Digitalcourage/EDRi European Digital Rights tbc*
 - Moderator: *Oonagh Aitken, LLLPlatform Steering Committee*
- Audience contribution and interactive session
- Closing and wrap-up, *Nils-Eyk Zimmermann (DARE Network)*
